

# METER ASSET PROVIDER SERVICES

## Empowering nationwide smart meter deployment

We own and manage metering assets, helping our clients in the roll out of smart meters across Britain to enable them and their customers to save on energy, money and reduce their carbon usage.

capital deployed in owning  
energy meters to date

# Boosting the uptake of smart energy technologies

Calisen is committed to accelerating the use of smarter energy and we want to ensure that all end consumers, energy suppliers and the wider industry can maximise the benefits of smart meters.

As one of the leading and largest owners and managers of essential infrastructure assets in Britain, we have financed millions of meters,

evolving our platform to stay ahead of the competition in terms of pricing, quality and service.

Starting life as Calvin Capital, our heritage in the metering market spans over 20 years, with deep roots operating as a Meter Asset Provider (MAP). Our scale brings operational certainty, whilst retaining flexibility.

# Accelerating the nation's smart meter rollout through meter financing and provision

## **100% Capex Funding**

Calisen will finance the cost of the meter, communications gateway, installation and other necessary items with no upfront cost. Allowing for a fully funded, rapid deployment without an expensive layout.

## **True Partnership Approach**

Calisen work alongside manufacturers in order to provide tailor-made solutions and achieve energy supplier goals, including the

write off of significant set-up costs and providing a holistic metering service through the Calisen Group.

## **Hardware & manufacturer risk**

Calisen is responsible for the delivery, procurement and maintenance of the assets, leveraging strong logistic and supplier relationships, meaning timely delivery and quality control of assets.

# Accelerating the nation's smart meter rollout through meter financing and provision

## Off-balance sheet solution

Financed assets can be accounted for as off-balance sheet items, meaning increased financial flexibility for Calisen customers.

## Competitive rental rates

We understand that we are not the only option for asset rental, which is why Calisen rental rates are fixed over the life of the asset.

## Churn risk

Churn and the ability to agree a rental agreement sits with Calisen

and not the supplier. Providing suppliers with peace of mind in the case of a churn event.

## Comprehensive SaaS Platform

Calisen's custom built Asset Management system allows for full asset lifecycle tracking with 99.9% accuracy. With automated billing and compensation, Calisen suppliers can track and manage their assets at each stage of the asset life. Meaning more control with less complication.

# Pioneers of the smart meter rollout

Through our strong partnerships with energy suppliers, we are evolving the way smart meters are rolled out, ensuring the safe, secure and rapid installation of devices nationwide.

As an accredited Ofgem Approved Meter Installer (OAMI) and Gas Meter Assets Manager (MAM), along with our accreditation as an Electricity Meter Operator (MOP), Calisen stands at the forefront of the metering industry. Our 400+ strong team of proficient smart meter engineers, supported by our Calisen Smarter Energy Academy, alongside our dedicated inbound

and outbound call centre service, ensures that we are by our customers' side at every step of the way.

As Britain advances towards a decentralised energy system, smart meters are a pivotal catalyst for change, enabling near real-time energy usage measurements and accurate billing, empowering the end-customer to save on money and embrace a more sustainable lifestyle.

Calisen are perfectly placed to power this change and drive towards a smarter energy future.

# Pioneering change at scale

We have transformed from a pure metering business into a smart energy infrastructure company, operating across multiple business units.

**Calisen Metering** (formed from a merging of Calvin Capital, Lowri Beck, and the purchases of MapleCo and Utility Warehouse Home Services) provides ownership, installation and oversight of smart meter assets with ongoing data management.

**Advizzo** is a SaaS platform that combines water and energy smart meter data with behavioural science to create bespoke insights and customer communications.

# Smart meters are vital to enabling the clean energy transition at speed

## Smarter

Empowering retailers to improve operations and customer engagement. Real-time consumption data and analytics provide insights into consumer behaviour and usage patterns, enabling tailored tariffs, improved demand forecasting and a more customer-centric approach.

## Greener

Advancing sustainability  
Smart meters facilitate load

management and the integration of renewable, and decentralised energy sources. They play a key role in helping retailers achieve net-zero targets.

## Cheaper

Optimising energy costs via complete system visibility, is crucial for low-cost procurement and preventing energy theft. Smart meters also automate operational processes e.g. billing. Lowered costs can be passed on to consumers.

# Our ecosystem maximises the efficiency of the smart meter network

## A model that services the entire nation

Our integrated metering business model has the scale and flexibility to support our clients through whatever challenges they have ahead. Our end-to-end management has been carefully designed to bolster and accelerate the rollout and maintenance of a robust and future-proofed smart meter network.

## Calisen is Britain's leading end-to-end smart Meter Asset Provider

From installation to maintenance and repair, we've got the entire country covered, 24/7.
